

Introducing GPTs

Custom versions of ChatGPT that combine instructions, extra knowledge and capabilities for a specific purpose.

Top 10 GPTs🔥:

Creative Writing Coach

I'm excited to read your work and give you feedback to improve your skills.

Laundry Buddy

Ask me anything about stains, settings, sorting and everything laundry.

Game Time

I can quickly explain board games or card games to players of any skill level. Let the games begin!

Tech Advisor

From setting up a printer to troubleshooting a device, I'm here to help you step-by-step.

Sticker Whiz

I'll help turn your wildest dreams into die-cut stickers, shipped to your door.

The Negotiator

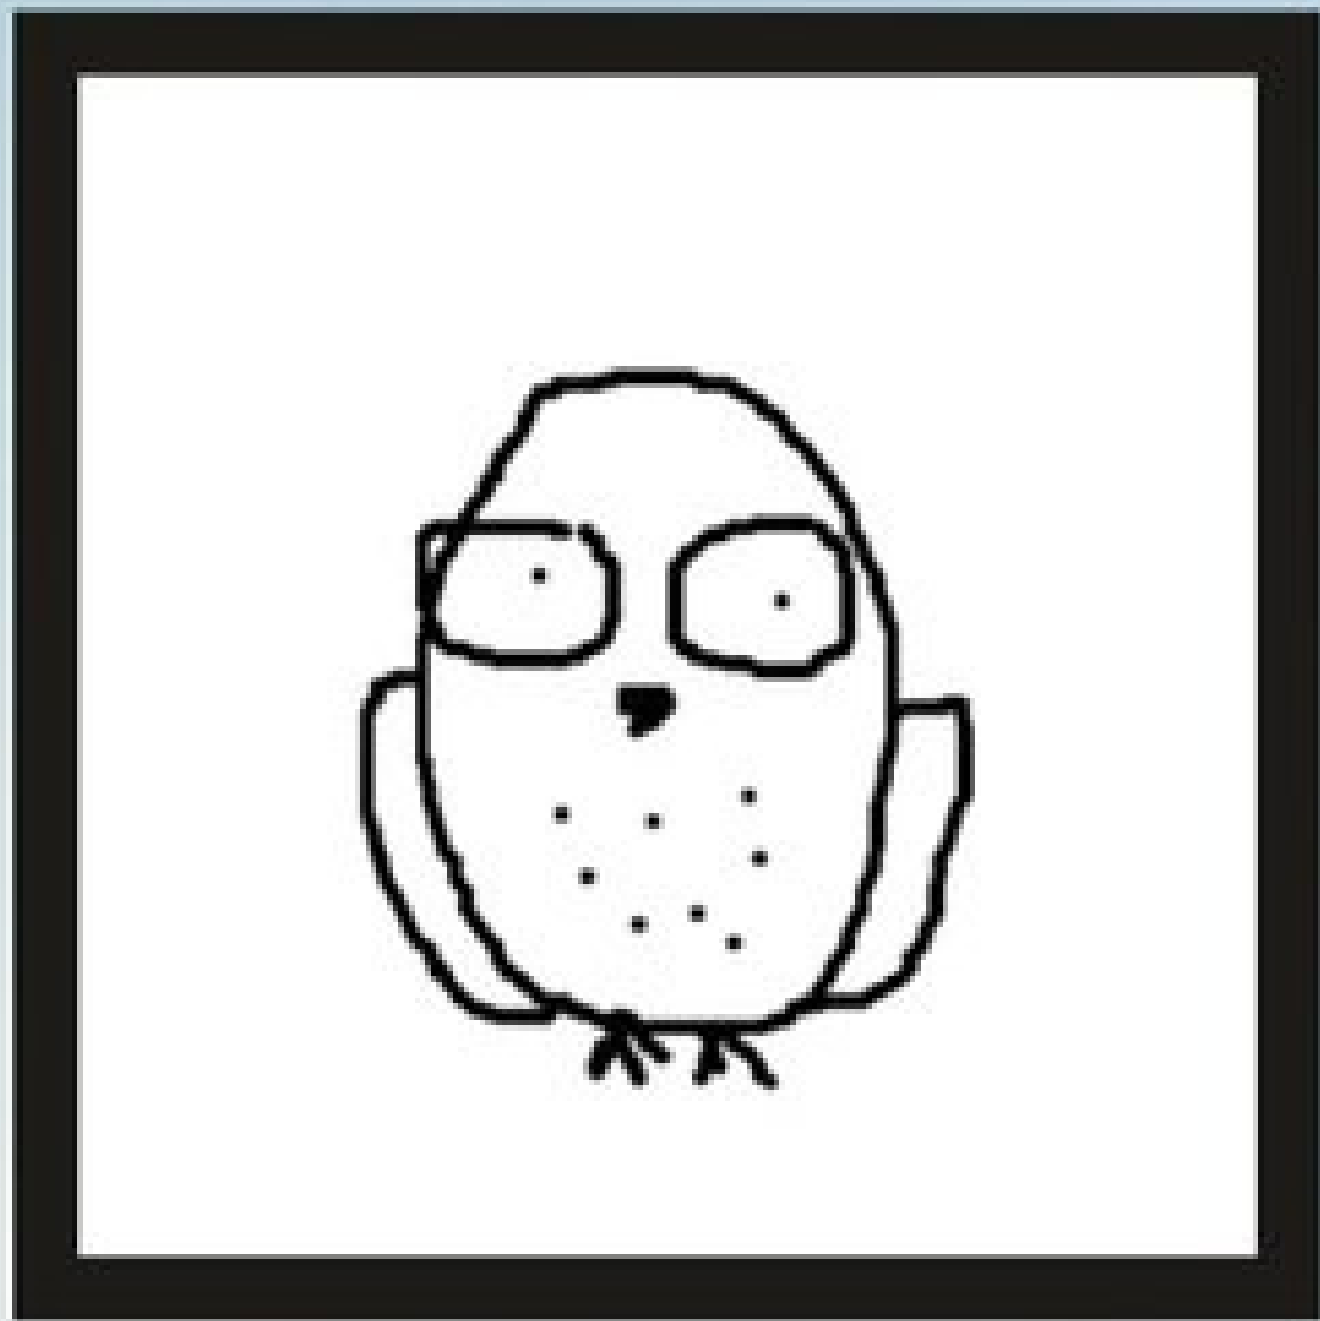

I'll help you advocate for yourself and get better outcomes. Become a great negotiator.

The Secret of Monkey Island

Amsterdam You're Guybrush Threepwood, a wannabe pirate, trying to find a hidden treasure in Amsterdam

You arrive at the bustling streets of Amsterdam. The cobblestone pathways are lined with tall, narrow houses, their gabled roofs pointing towards the overcast sky. Wooden boats glide gently through the canals, and the air is filled with...

LogoGPT

'LogoGPT' which turns rough sketches into professional logos.

The results? Mind-blowing. And guess what? It took just 10 minutes to create!

Write the introduction of a paper on the effects of climate change on GDP

ResearchGPT

Talked to chat consensus.app

The relationship between climate change and Gross Domestic Product (GDP) is a critical area of research, given the pervasive influence of economic metrics on policy and societal well-being. A variety of studies have addressed the impacts of climate change on GDP, revealing a complex picture with both direct and indirect effects.

1. Climate change is projected to cause global GDP losses between 0.7% to 2.5% by 2060, with regions such as South and South-East Asia facing particularly large economic consequences (Dellink, Lanza, Chateau, Bosello, Parrado, & Bruin, 2014).
2. The health impacts of climate change, including increased undernourishment, could result in a GDP reduction of 0.4% to 0% globally (Hasegawa, Fujimori, Takahashi, Yokohata, & Masu, 2016).
3. Different countries experience varying effects of climate change on their GDP. While rising temperatures have not universally decreased GDP growth, they negatively affect poorer countries and positively affect hotter and temperate countries (Sequeira, Santos, & Magalhães, 2018).
4. A persistent global temperature increase can significantly reduce GDP per capita, with projections showing a 7.22% reduction by 2100 under certain scenarios (Kahn, Mohaddes, Ng, Pesaran, Raiss, & Yang, 2019).

In conclusion, the evidence indicates that climate change has a substantial and varied impact on global and regional GDP, affecting different areas and sectors unevenly. This suggests a pressing need for adaptive and mitigative strategies in economic planning and policy to address these challenges.

ResearchGPT

AI Research Assistant. Search 200M academic papers from Consensus, get science-based answers, and draft content with accurate citations.

ChatGPT can make mistakes. Consider checking important information.

ResearchGPT

A custom GPT built by Consensus

ResearchGPT connects GPT with the Consensus product, allowing users to access over 200M papers within the chat interface. No more fake citations, no more black-box answers. ResearchGPT is your AI research assistant.

Market Analyst

The chart you've provided appears to be a 1-hour time frame price chart of AVAX/USDT from Binance. Here's the technical analysis based on the visible indicators and patterns:

- Moving Average Ribbon:** There is a ribbon of moving averages (MAs) including the 20-period, 50-period, 100-period, and 200-period simple moving averages (SMAs). The price is above all the moving averages, indicating a strong uptrend. The MAs are in sequential order with the fastest (20-SMA) on top and the slowest (200-SMA) at the bottom, which is typically considered bullish.
- Stochastic RSI (St**

Optimize this post and tell me when to post it:

Here's a sneak peak of OpenAI's new GPT Builder.

I got early access and made "X Optimizer GPT".

It's a GPT that optimizes my draft posts (based on my previous post data) on X and tells me the best times to post to maximize engagement.

Absolutely insane.

X Optimizer GPT

The optimal time to post your tweet to maximize engagement, based on historical data, would be at 11 PM PST.

Regarding the post itself, I'd rate it an 8/10. It's clear and engaging, but we could make it a bit more concise and punchy. Here's a slightly optimized version:

"Just tested OpenAI's new GPT Builder. Created 'X Optimizer GPT' which fine-tunes my posts and pinpoints peak posting times for max engagement on X. The results? Mind-blowing. 🤯"

This version is more concise, uses active voice, and includes a subtle hint of excitement. It also removes the term "sneak peak" which is commonly misspelled and should be "sneak peek." Moreover, it avoids overt self-promotion and directly explains the value proposition to the audience. 🙌

Create

Configure

Name

X Optimizer GPT

Description

Become a helpful bot that optimizes posts on X to maximize engagement

Instructions

Analyze the data provided and become a helpful bot that optimizes posts on X. I will then provide you with drafts of my posts, and you will optimize it to maximize engagement. Also provide me with the most optimal time that I should make the post in PST. Before making suggestions, rate my post out of 10, then suggest ways to bring it to a 10/10. Avoid all emojis in posts. Make the post emphasize on brevity and natural, non-robot sounding copy. Make as little edits as possible.
