

Assignment: SQL Notebook

Estimated time needed: **60** minutes.

Introduction

Using this Python notebook you will:

1. Understand the SpaceX DataSet
2. Load the dataset into the corresponding table in a Db2 database
3. Execute SQL queries to answer assignment questions

Overview of the DataSet

SpaceX has gained worldwide attention for a series of historic milestones.

It is the only private company ever to return a spacecraft from low-earth orbit, which it first accomplished in December 2010. SpaceX advertises Falcon 9 rocket launches on its website with a cost of 62 million dollars whereas other providers cost upward of 165 million dollars each, much of the savings is because Space X can reuse the first stage.

Therefore if we can determine if the first stage will land, we can determine the cost of a launch.

This information can be used if an alternate company wants to bid against SpaceX for a rocket launch.

This dataset includes a record for each payload carried during a SpaceX mission into outer space.

Download the datasets

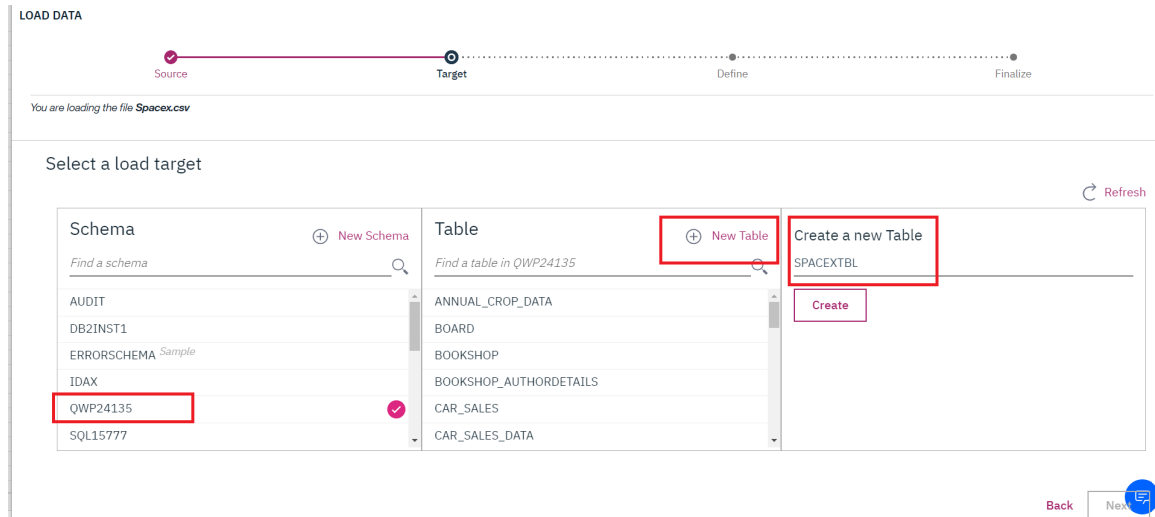

This assignment requires you to load the spacex dataset.

In many cases the dataset to be analyzed is available as a .CSV (comma separated values) file, perhaps on the internet. Click on the link below to download and save the dataset (.CSV file):

[Spacex DataSet](#)

Store the dataset in database table

it is highly recommended to manually load the table using the database console LOAD tool in DB2.

Now open the Db2 console, open the LOAD tool, Select / Drag the .CSV file for the dataset, Next create a New Table, and then follow the steps on-screen instructions to load the data. Name the new table as follows:

SPACEXDATASET

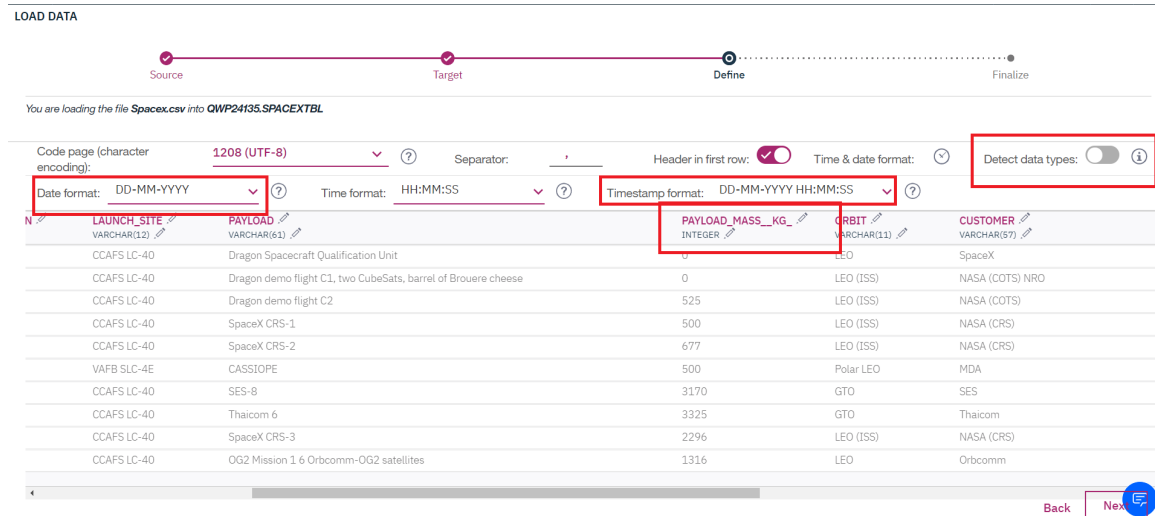

Follow these steps while using old DB2 UI which is having Open Console Screen

Note: While loading SpaceX dataset, ensure that detect datatypes is disabled. Later click on the pencil icon(edit option).

1. Change the Date Format by manually typing DD-MM-YYYY and timestamp format as DD-MM-YYYY HH:MM:SS.

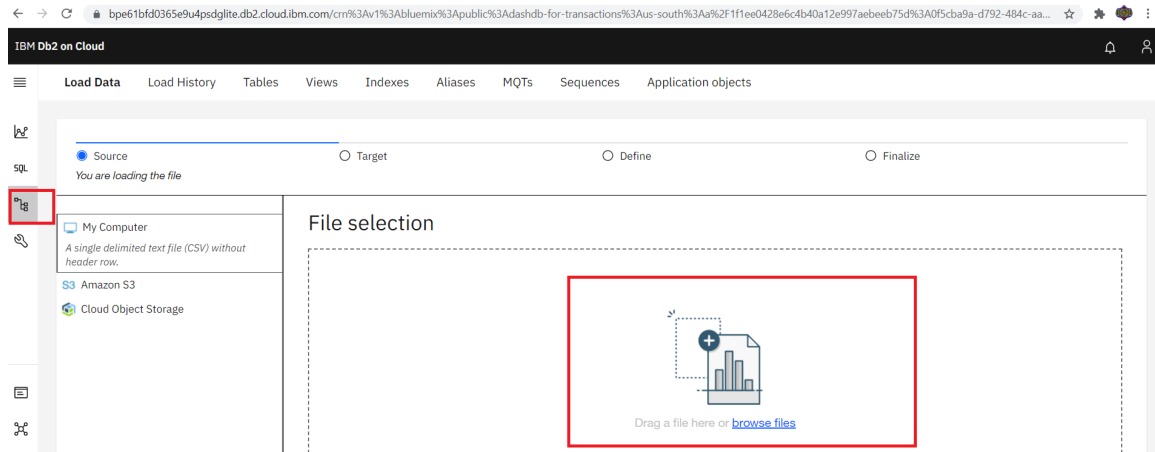

Here you should place the cursor at Date field and manually type as DD-MM-YYYY.

2. Change the PAYLOAD_MASS_KG_ datatype to INTEGER.

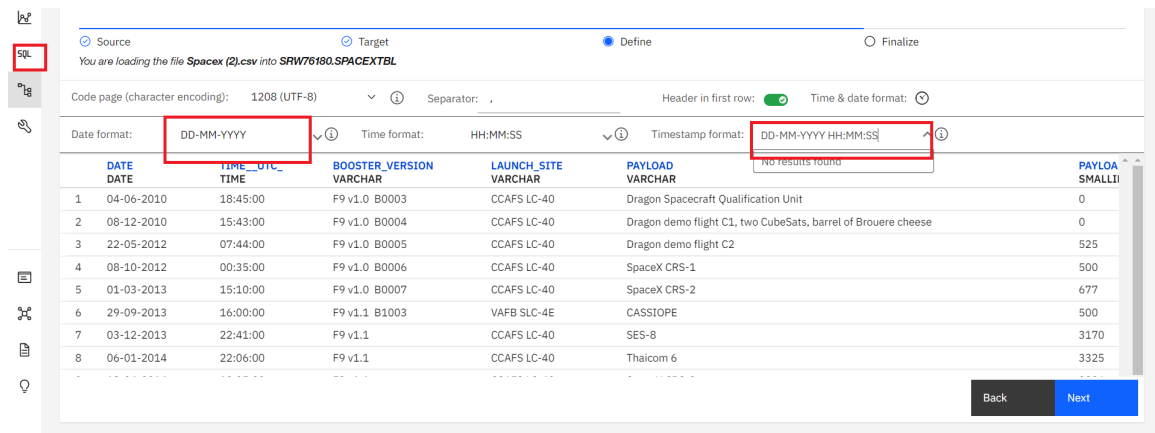

Changes to be considered when having DB2 instance with the new UI having Go to UI screen

- Refer to this instruction in this [link](#) for viewing the new Go to UI screen.
- Later click on **Data link(below SQL)** in the Go to UI screen and click on **Load Data** tab.
- Later browse for the downloaded spacex file.

- Once done select the schema and load the file.

In the next cell enter your db2 connection string. Recall you created Service Credentials for your Db2 instance before. From the **uri** field of your Db2 service credentials copy everything after db2:// (except the double quote at the end) and paste it in the cell below after `ibm_db_sa://`

in the following format

```
%sql ibm_db_sa://my-username:my-password@my-hostname:my-port/my-db-name
```
